Glossary	27

Live the life you want in a custom-detailed home that offers you and your family beauty and durability for years to come. That's the freedom PGT® gives you.

From the day they're installed and for every moment you own your home, our windows and doors bring exceptional quality and durability to elevate your home and lifestyle.

That's the freedom of PGT.

Innovation for a lifetime

PGT has led the industry for more than 40 years by improving quality standards, pushing innovation, and delivering superior quality engineered to last.

INSULATING GLASS

**HEAVY DUTY
ALUMINUM**

Highly resistant to outdoor elements, our extruded aluminum frames are exceptionally durable and require little maintenance.

**MECHANICALLY
FASTENED CORNERS**

Provide added strength and resistance to warping and other damage.

Energy Efficiency Upgrade

Optional coatings and insulating glass can achieve a higher level of energy efficiency. Speak to your local dealer for more information.

Hours of Testing

PGT® ClassicVue Max® aluminum products are tested for performance and safety.

Accredited & Approved

ClassicVue Max® products are continuously validated by our industry's accredited organizations. The certifications we earn are your assurance that our products will perform as expected.

Certifications & Ratings:

National Fenestration Rating Council
Miami-Dade Notice of Acceptance (NOA)
Florida Product Approval
Texas Department of Insurance

Meets or exceeds the Fenestration Testing Requirements specified in the International Building Code.

Elevated style. Designed for customization.

Our aluminum products are engineered for the highest quality and durability. Designed to fit any style of home with the most customized glass and frame options available.

We're so sure of their performance, we back our windows and doors with one of the industry's best warranties.

LIMITED LIFETIME WARRANTY

On the frame. 10 years on frame finish, hardware, screens, and moving parts.

“

I'm really happy with my new windows and doors and they've definitely been worth the cost.

– Chris C., The Villages, FL

PGT® CLASSICVUE™ MAX ALUMINUM DOORS

Sliding Glass Door

This smooth operating door will add extra security to your home and let natural light into your living room or master bedroom.

Pages 14-15

French Door

Pairing elegance and high functionality, these single or double French doors are equipped with European-style hardware and are available with matching sidelites.

Page 16

Cabana Door

Featuring a sleek, modern appearance that complements contemporary homes, this door adds a beautiful touch to your porch, lanai, or garage.

Page 17

Single Hung Window

Raised from the bottom with a fixed top, our single hung window offers ventilation and effortless protection in a traditional style that can be used throughout the home.

Page 20

Horizontal Roller Window

Blending modern style and top-notch protection, this easily operated window is perfect for kitchens, bathrooms, and more.

Page 21

Casement Window

This window's foldaway handle prevents interference with your curtains. Pair them beautifully with matching Awning and Picture windows.

Page 22

Awning Window

Designed for use in high spaces, this beautiful-yet-functional window is designed to block rain from entering, while providing outstanding ventilation and light.

Page 23

**Fixed Lite Picture Window
Fixed Lite Casement Picture Window**

A non-operable window that enhances the look of living rooms, kitchens, and master bedrooms with maximum, unobstructed sightlines.

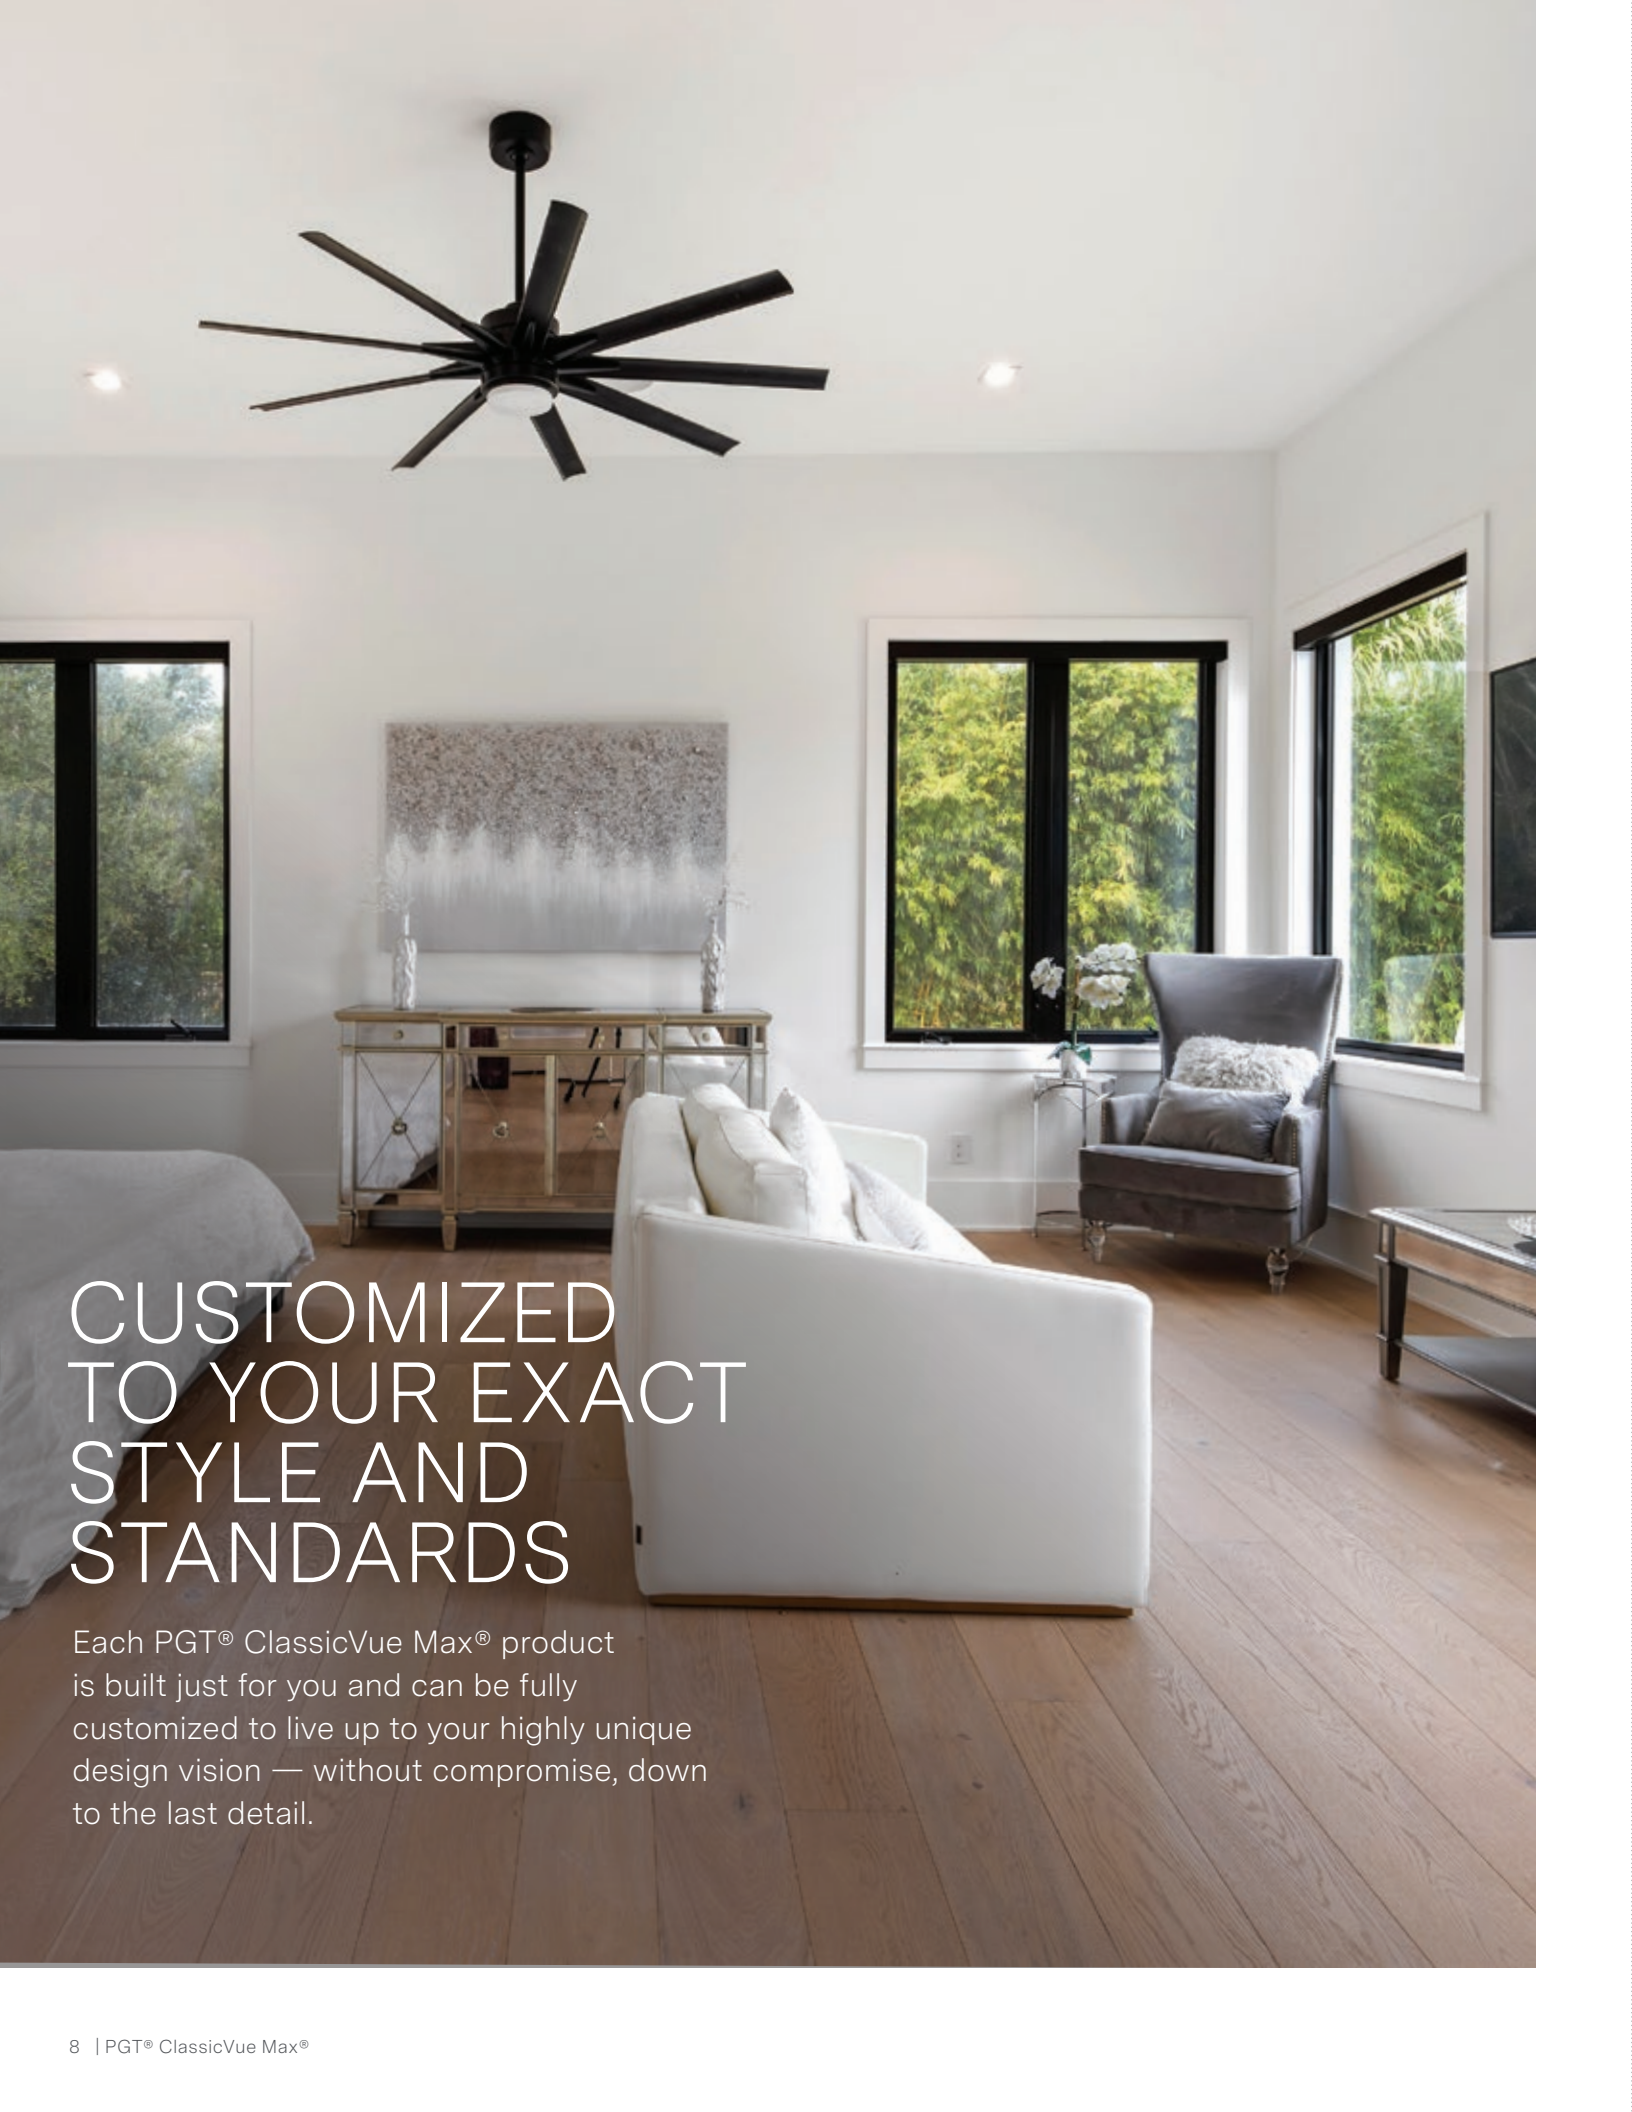

Pages 24

**Fixed Lite
Architectural Window**

Our wide selection of unique shapes and styles will help allow natural light, improve security, and enhance your home's beauty and aesthetics.

GLOSSARY

Argon Gas — A safe, odorless, colorless, non-toxic, non-flammable inert gas that is commonly used in place of air between the glass panes of an insulated Low-E glass unit to reduce temperature transfer.

Corrosion Resistant — Refers to how well a substance can withstand damage caused by oxidization or other chemical reactions.

Design Pressure — Wind load pressure, expressed in pounds per square foot (psf).

ENERGY STAR® — An independent U.S. government program that establishes a standard set of guidelines to recognize the energy efficiency of various products. ENERGY STAR® guidelines are used in conjunction with a variety of building materials, including windows and patio doors.

Florida Product Approval — A statewide approval system that requires manufacturers to submit testing and engineering data to ensure certain building components meet Florida Building Code standards.

Forced-Entry Resistance — The test methods intended to establish a measure of resistance for window assemblies subjected to attacks, other than by impact.

Impact Resistant — Shatter-resistant glass. When the glass breaks, the shattered pieces will adhere to the interlayer.

Insulating Glass — Window panes separated by an air- or other gas-filled space to reduce heat transfer.

Interlayer — A shatter-resistant plastic membrane sandwiched between two panes of glass.

International Building Code — A model building code developed by the International Code Council that has been adopted throughout most of the United States.

Laminated Glass — Two panes of glass bonded together with a strong, clear interlayer.

Laminated Insulating Glass — Comprised of three panes of glass: two panes bonded together with a strong, clear interlayer and one pane for added insulation.

Large-Missile Impact — Test used on windows and doors in which a 9-lb. 2' x 4' is propelled at a speed of 34 mph onto test subject.

Low-E (Emissivity) Glass — Glass with a transparent, metallic oxide coating applied onto or into a glass surface. The coating typically allows short-wave energy to pass through but reflects long-wave infrared energy, which improves the U-value.

Miami-Dade Notice of Acceptance (NOA) — A certification method controlled by Miami-Dade County that requires products to be tested to the TAS testing protocols.

Monolithic Glass — A single pane of glass cast using one glass thickness.

National Fenestration Rating Council (NFRC) — A non-profit organization that provides energy performance ratings on windows, doors, skylights, and attachment products.

Privacy Glass — Glass that has been made translucent instead of transparent.

Sea Turtle Protection Code — Protects sea turtles along the Florida coastline during nesting season by restricting the amount of light permitted through windows and doors.

Sound Transmission Class (STC) — An integer rating that provides an estimate of the sound insulation performance of an interior building partition (such as a window or door) between indoor spaces. The higher the number, the less sound is transmitted.

Tempered glass — Treated glass that is strengthened by reheating it to just below the melting point and then suddenly cooling it. When shattered, it breaks into small pieces. Approximately four times stronger than standard annealed glass; is required as safety glazing in patio doors, entrance doors, sidelites, and other hazardous locations. It cannot be recut after tempering.

Ultraviolet (UV) — The invisible rays of the spectrum that are outside of the visible spectrum at its short-wavelength violet end. Ultraviolet rays are found in everyday sunlight and can cause fading of paint finishes, carpets, and fabrics.

Window Opening Control Device — A device that limits the opening of a window sash to a predetermined position. The device includes a release mechanism that shall allow the sash to be fully opened and that automatically resets when a window is fully closed.
